To Whom It May Concern:

Eye-2-Eye (Building, Renovations, Repair) - Andy le Roux, was referred to me by a mould specialist after mould and rising damp had been detected throughout my home. The required scope of the job was extensive comprising silicone gel injections, above the natural ground level at 75mm centres, into the house perimeter walls, the chipping off of the plaster to a 1.2m height, both on the interior and exterior house walls, as well as a multiple latex layer application and re-plastering of the chipped areas prior to the painting of the entire house. As a result of the above-mentioned requirements, a few window reveals were also affected. Burglar bars to these windows had to be removed and altered prior to the painting and refitting thereof. The project was labour intensive but mostly required a systematic detailed approach. Andy impressed me in of all these fields, including his project-management undertakings, and I consequently contracted him and his team to also waterproof and paint the entire boundary wall. I can highly recommend him, as he is not only very qualified for the specialised tasks (as mentioned above), but also takes a personal interest and pride into the outcome.

Yours truthfully,

Christelle van der Merwe
